

## VideoManager EL Export to CommandCentral Evidence Quick Reference Guide

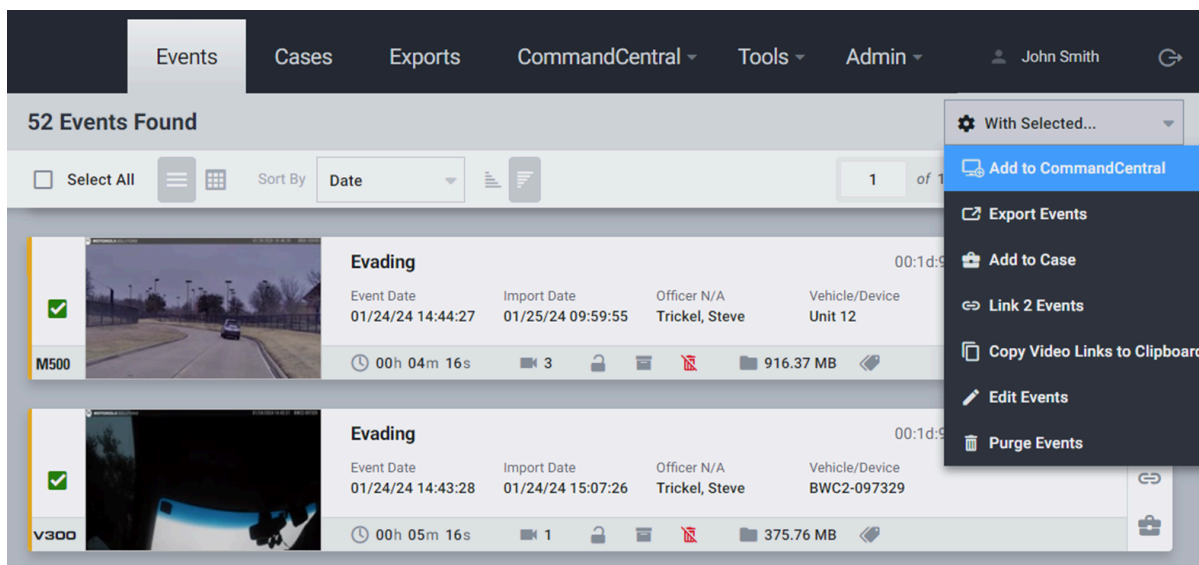

This document will detail how to send a copy of Recorded Events from VideoManager EL to CommandCentral Evidence at [evidence.commandcentral.com](https://evidence.commandcentral.com) (using the same login credentials as CommandCentral Vault). Users must have the permission “CC Export” to perform this task.

1. In VideoManager EL, in the **Events** tab select one or multiple Recorded Events and click **“Add to CommandCentral”**.

For one event, Use the Actions Menu icon: ⋮

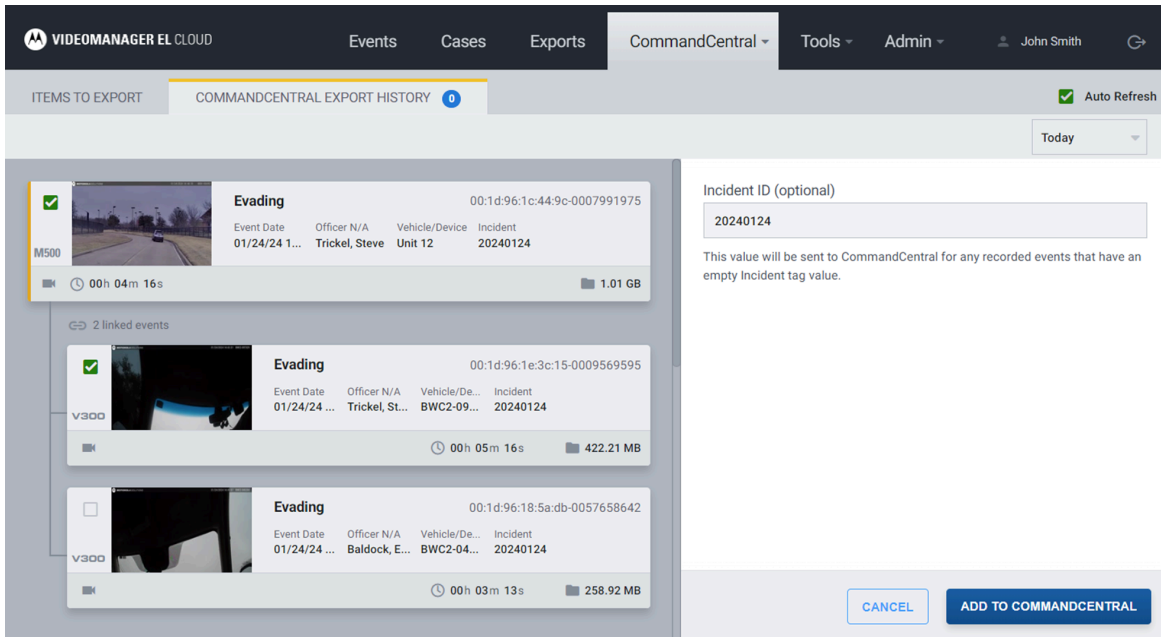

For multiple, click the checkbox for each event and use the “With Selected” menu.

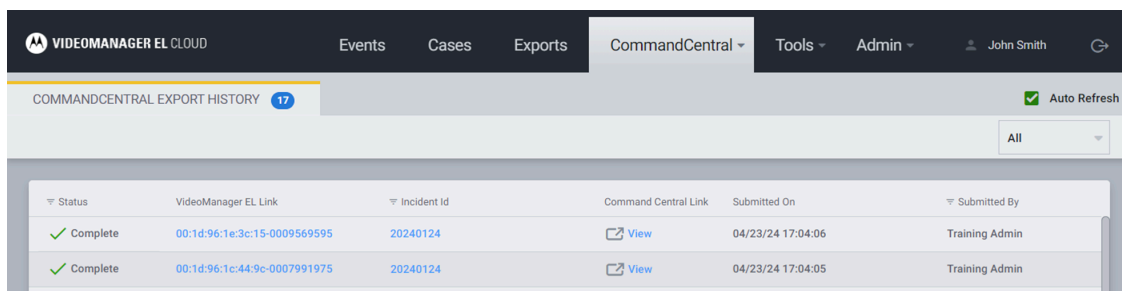

- On the CommandCentral export screen optionally add an Incident ID to create an Incident in CommandCentral Records and then click **"Add to CommandCentral"**.

**Note:** This is a copy of the file that is exported to CommandCentral Evidence and you can only send an event once. If a checkbox grayed out, that event has already been sent.

If an Incident ID was added in the SmartControl application, added in Event Details or through the EL CAD/RMS integration it will automatically appear in the export screen.

- Once completed the Export History includes links to the events in CommandCentral Evidence and a link to the Incident in CommandCentral Records (if Incident ID was added).

On the **Events** tab, an  icon appears to show that the event has already been sent to CommandCentral in the past.
